Sub - Introduction of new Web Based 'Critical Care Management and Information System (CCMIS)' in CCU portal

Department of Health & FW has developed a Web based application for regular reporting (on line) of CCUs & HDUs. This has been tested as beta version in functional CCUs & HDUs in different Medical College & Hospitals, District Hospitals, Sub Divisional Hospitals and selected Multi/Super Speciality Hospitals & Rural Hospitals. All functional CCUs & HDUs have already started patient based data management and on line reporting through this software in beta version.

Although the basic patient based data are updated through the software, there are in existence of lots of Registers in each of the CCU / HDU and this is observed that a major part of the working hour of the Nursing personnel are occupied by filling the different type of Registers. Few registers are filled up by on duty Nursing Personnel working on the floor and few registers are filled up by Nursing in Charges posted in the respective units.

Now, a new Web Based Critical Care Management and Information System (CCMIS) is introduced to ensure paperless patient management system in the CCUs & HDUs. This will replace the manual data entry in different registers.

It is important that the patient data should be keyed in / entered in real time. Regular data entry should be updated by Medical Officers on duty, Nursing Personnel on duty, CCU Technician or any other persons engaged for this purpose by respective hospital authority.

All Medical Officers, Nursing Personnel including Nursing in charge posted in the respective CCUs & HDUs and other personnel who are regularly engaged in the CCU / HDU related Data entry process should be individually registered in this system and generated their individual user Id & password.

MO in charge and Nursing in charge of the respective CCU / HDU are given responsibility to monitor regular entry & update of treatment related matters and nursing related matters respectively in CCMIS of their own unit.
